

A1
identifier and sending, to a publisher-designated location, information regarding the number of accesses to the electronic document that have occurred.

Sub B2
A2
4. (Amended) The system defined in Claim 1 wherein the document identifier comprises a Universal Resource Locator (URL).

Sub B3
A3
8. (Amended) The system defined in Claim 1 wherein the server maintains access logs and updates the access logs each time the electronic document is accessed.

Sub B4
A4
12. (Amended) The system defined in Claim 11 wherein the server manager automatically sends an electronic mail message to the publisher in response to the electronic document being accessed by a user.

Sub B5
A5
14. (Amended) A method comprising:
a multifunction machine saving a copy of an electronic document to a server in the absence of an explicit command by a user and in response to another user specified function associated with the electronic document;
sending a network document identifier and password for accessing the electronic document;
accessing the electronic document using the network documents identifier and password; and
sending an electronic message indicating the number of accesses to the electronic document that have occurred.

Sub
B6

17. (Amended) A computer-implemented method comprising:

receiving an electronic document at a server that has been saved in the absence of an explicit command by a user to save the electronic document and in response to another user specified function associated with the electronic document;

the server allowing access to the electronic document by using a security key and a document resource identifier; and

the server automatically notifying a publisher that an electronic document has been accessed.

A

18. (Amended) The method defined in Claim 17 wherein the server notifies a

user that an electronic mail message containing a Universal Resource Locator (URL) has been sent from a server.

Sub
B7

22. (Amended) An apparatus comprising:

means for receiving an electronic document at a server that has been saved in the absence of an explicit command by a user to save the electronic document and in response to another user specified function associated with the electronic document;

means for allowing access to the electronic document by using a security key and a document resource identifier; and

means for automatically notifying a publisher that an electronic document has been accessed.
